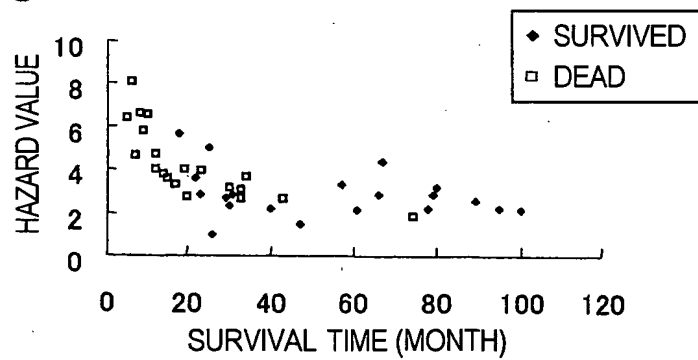

Figure 1 is a scatter plot showing the relationship between Hazard Value (Y-axis) and Survival Time (Month) (X-axis). The Y-axis ranges from -3 to 9, and the X-axis ranges from 0 to 120 months. The legend indicates two groups: 'RECURRED' (represented by diamonds) and 'NOT RECURRED' (represented by squares). The 'NOT RECURRED' group shows a general downward trend in hazard value as survival time increases, starting from high values (up to 9) at low survival times and decreasing to values around 0 or below 0 as survival time increases. The 'RECURRED' group shows a more stable hazard value, generally staying between 0 and 3, with some points below 0 at later survival times.

A scatter plot showing the relationship between HAZARD VALUE (Y-axis, ranging from -2 to 7) and SURVIVAL TIME (MONTH) (X-axis, ranging from 0 to 150). The legend indicates two groups: RECURRED (filled diamonds) and NOT RECURRED (open squares). The NOT RECURRED group shows a high initial hazard value (around 6.2) that rapidly decreases to near zero within the first 20 months. The RECURRED group shows a more gradual decrease in hazard value, starting around 2.5 and reaching near zero by 100 months.
